EDUCATION

California Polytechnic State University, San Luis Obispo

Sep 2020 – Dec 2024

Bachelor of Science in Computer Science | Dean's List: Fall 2024, Winter 2024

PROFESSIONAL EXPERIENCE

Founder & Software Engineer — Distill Software LLC

Mar 2026 – Present

- Founded an LLC and solo-built [Distill](https://studystill.com) (studystill.com), a gamified platform that turns open textbooks into interactive courses; live in production with Stripe billing.
- Built the Python content pipeline: PDF extraction, multi-pass LLM generation, and validated ingest into PostgreSQL, producing 500–1,000 practice questions per textbook.
- Designed a blind-solve gate where an independent LLM must reproduce every computed answer before it ships, cutting wrong answer keys from 1.4% to zero across ~2,000 audited questions.
- Shipped the full app: Next.js/TypeScript over PostgreSQL, FSRS spaced-repetition scheduling, installable PWA, and gamification (XP, streaks, study pets, leaderboards).

Student Lead — Cal Poly Information Technology Services

Jan 2024 – Feb 2025

- Led a team of 12 student technicians supporting 800–900 staff and faculty across three of Cal Poly's six colleges (Business, Liberal Arts, Agriculture) and the campus library, keeping response times under 24 hours.
- Maintained a 4.6/5 average ticket-resolution satisfaction score across the team.
- Interviewed, hired, and onboarded 8 student technicians, ramping each to handling their own tickets within 4–5 weeks through structured shadowing and hands-on training.
- Ran cross-department IT projects and maintained the team's Jira process documentation.

Student Assistant — Cal Poly Information Technology Services

Sep 2022 – Jan 2024

- Imaged and set up 100+ devices over two years for the Campus Computer Refresh program and the student rental fleet, using Jamf and Active Directory to track and manage them.

PROJECTS

ITS Support Chatbot (Senior Project) | *Python, scikit-learn, OpenAI API, Flask*

Apr – Dec 2024

- Built the full retrieval pipeline end to end: cleaned and indexed the knowledge base with TF-IDF, ranked articles by cosine similarity to each query, and assembled the top 3 matches into a grounded prompt for GPT-3.5.
- Chose TF-IDF over vector embeddings to eliminate per-query embedding API calls, cutting cost with no measurable hit to retrieval quality.
- Validated retrieval on ~200 real student questions: the top-ranked article was correct ~85% of the time, with the needed information in the top 3 in nearly all cases.

IT Device Decommissioning Automation | *Power Apps, Power Automate, SharePoint*

Mar – Dec 2024

- Designed the SharePoint schema and audit fields, the front end, and the automation that routes each task to the right person by device type (Active Directory vs. Jamf).
- Cut decommissioning time from ~2 weeks per 20 devices to ~3 days; adopted as the official ITS process and selected to present at an inter-CSU IT conference.

TECHNICAL SKILLS

Languages: Python, Java, C, JavaScript/TypeScript, SQL, HTML/CSS

Frameworks & Libraries: React, Next.js, Node.js, Flask, PyTorch, scikit-learn, NumPy, Drizzle ORM, Prisma

Tools & Platforms: Git, Docker, Linux, PostgreSQL, Stripe, REST APIs, OpenAI API, Vercel, Oracle Cloud, Jira

Concepts: System Design, Full-stack Development, RAG & LLM Pipelines, Agile/Scrum
